Status Report #24

2020. 04. 24 (Fri)

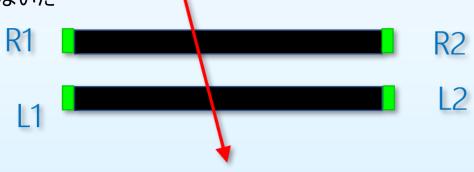

M1 FUJIWARA Tomomasa

Cosmic-ray

• 今週初めに, リモートで測定できるように設定変更の作業を行った.

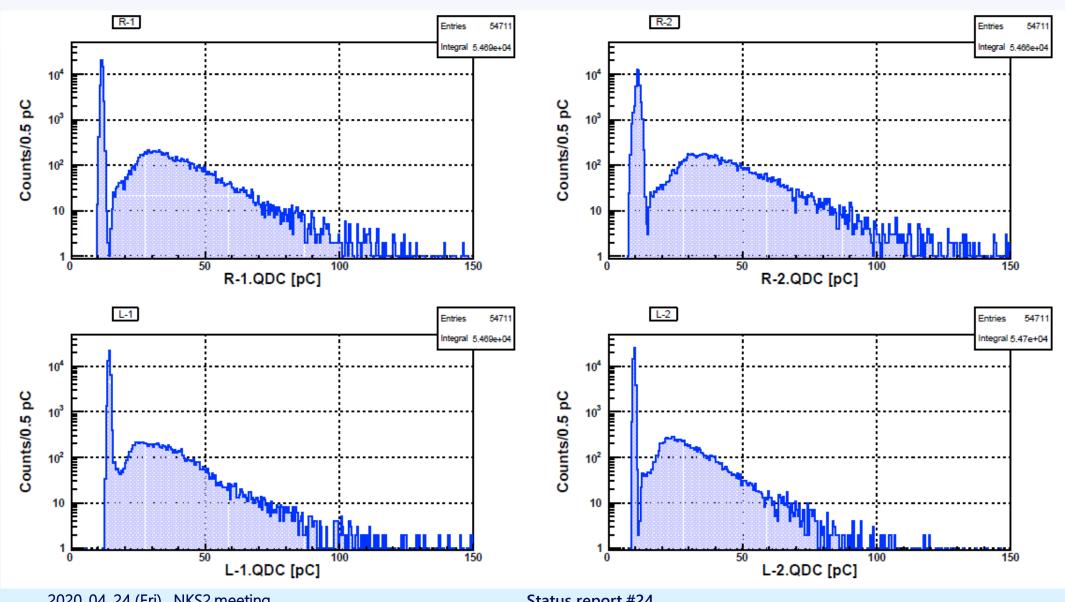

〈主な変更点〉

- *Bias supply: connect LAN
- * QDC gate vs. signal のタイミング調整
- * トリガー: ToF all ch coin. ⇒ All coin. ⊕ Clock.
- *Clock.: 50M Hz → Scaler → Carryout
 - ⇒ V_{th}変更, シンチ・MPPC回路交換以外の作業はリモートで可能
- MPPC 基盤: 基盤表面の一部を削り, GNDピンにつながる経路とベタをつないだ
- 月曜からデータ取得を再開
- L(下側) のMPPC のみ電圧を変更. 178.8, 190.8, 202.8 [V]

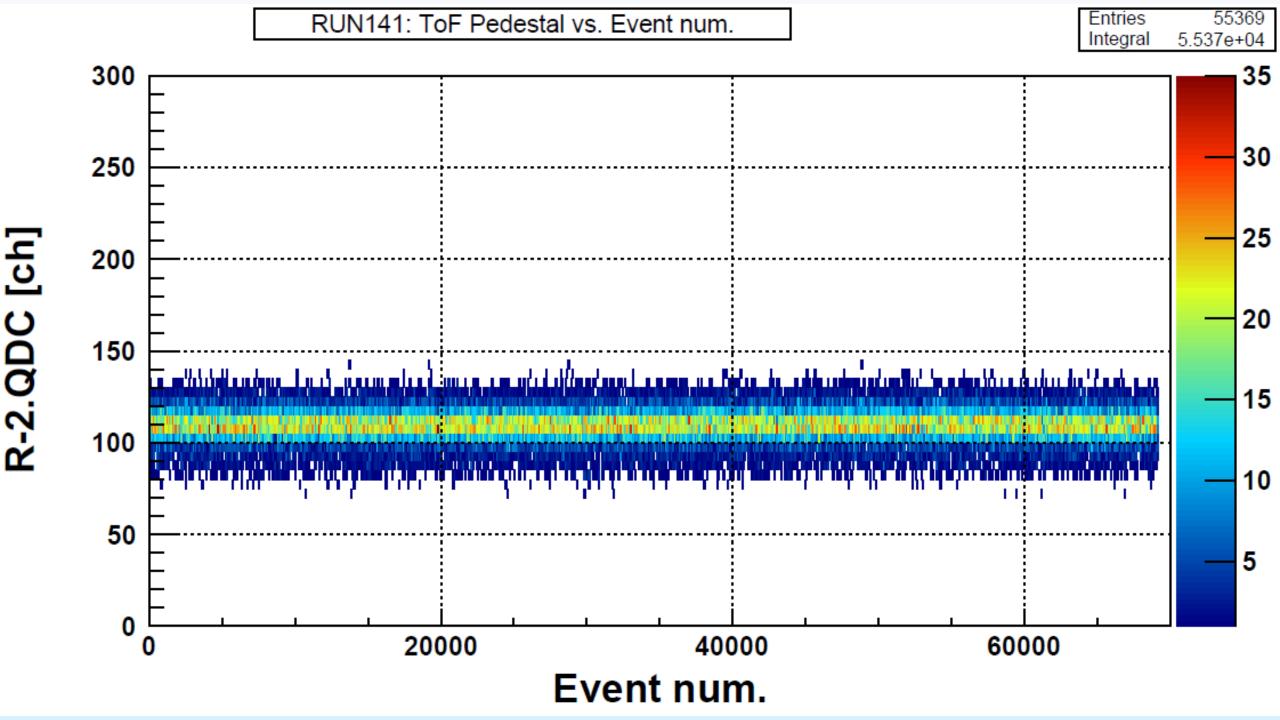

Cosmic-ray

• 下側(MPPC*4): 178.8V

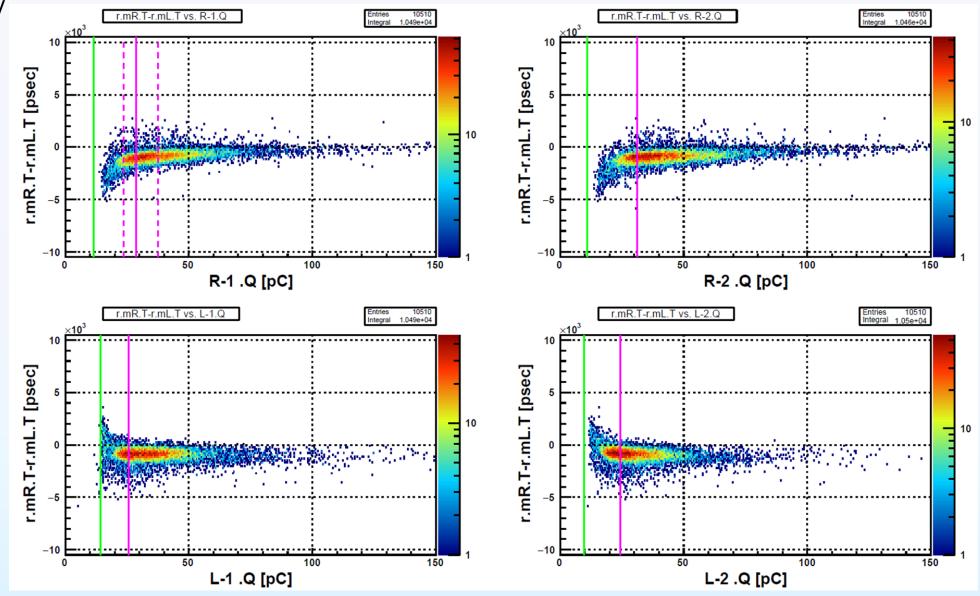

2020. 04. 24 (Fri) NKS2 meeting

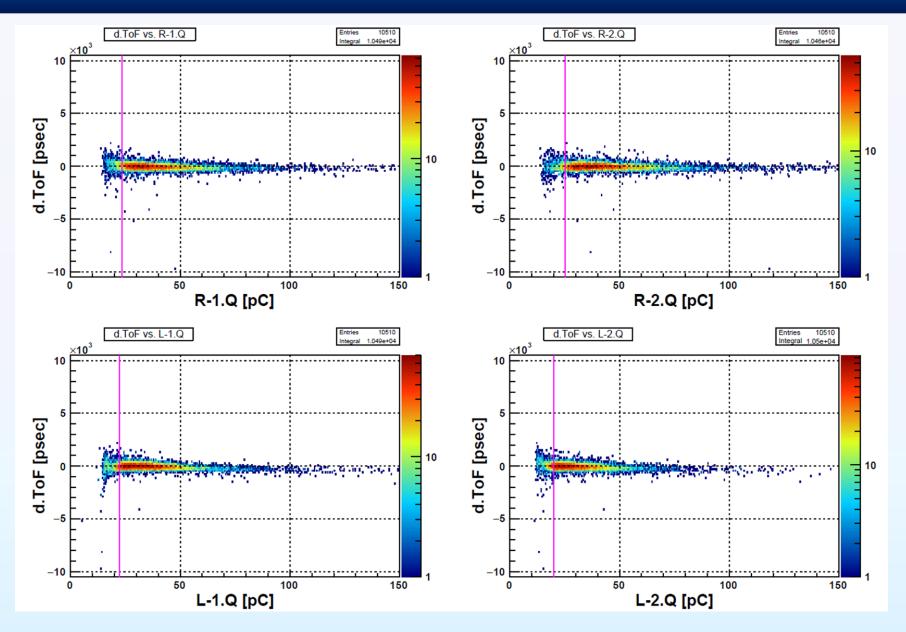

Status report #24

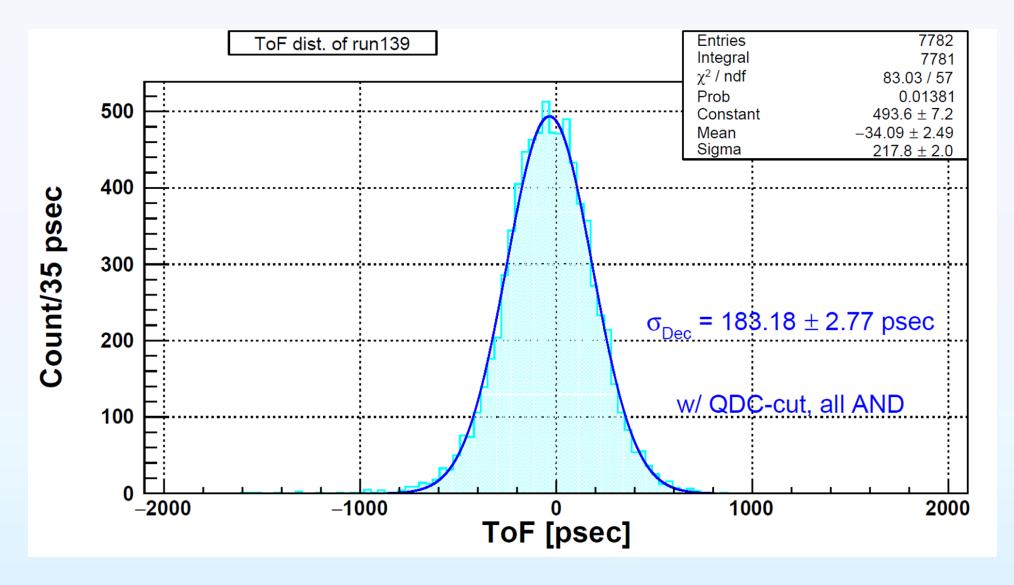

• 下側(MPPC*4): 178.8V

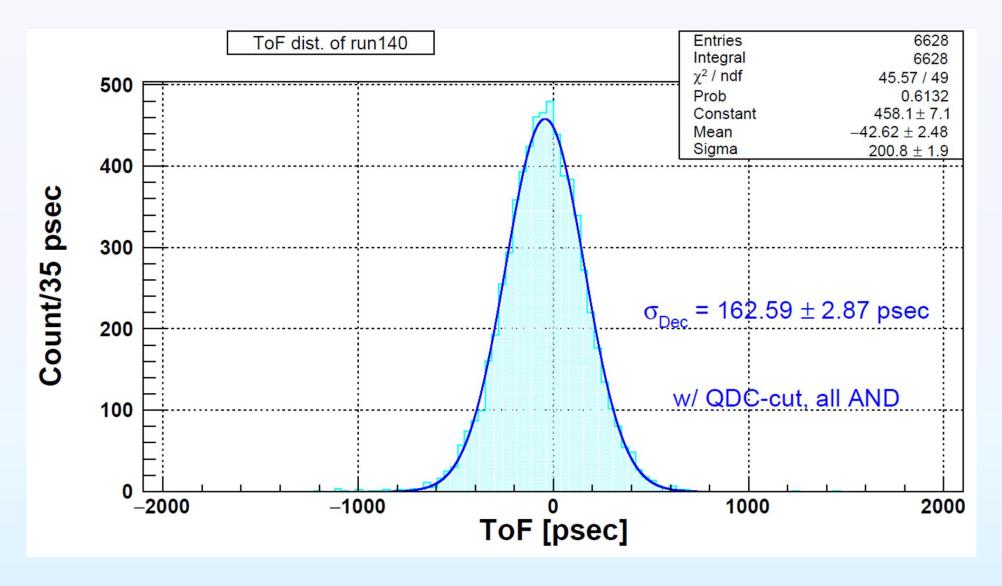

• 下側(MPPC*4): 178.8V

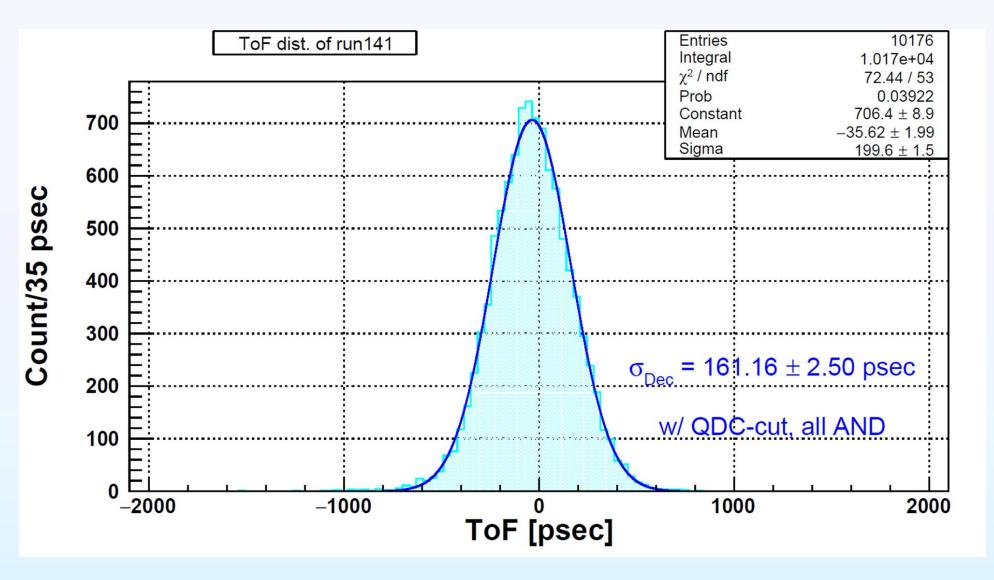

• 下側(MPPC*4): 178.8V

• 下側(MPPC*4): 190.8V

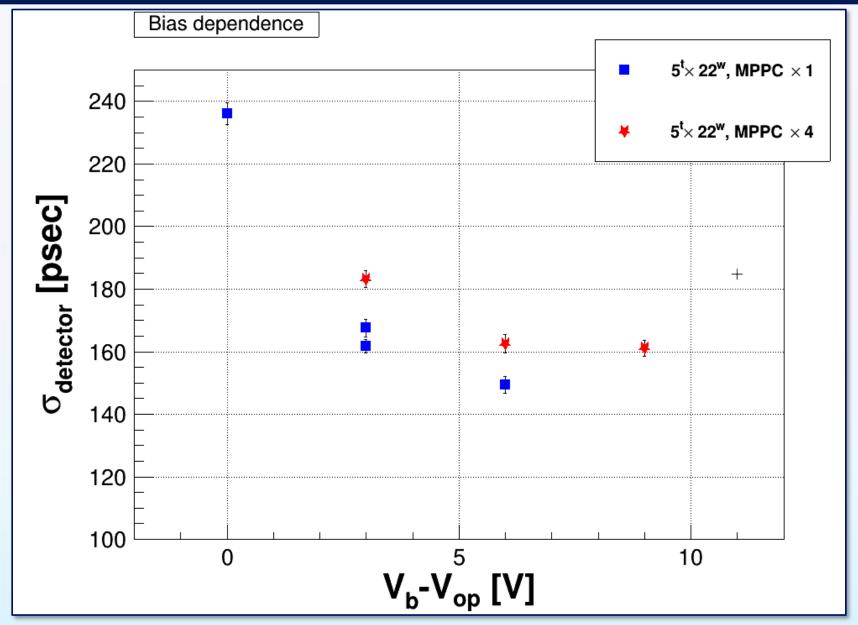

• 下側(MPPC*4): 202.8V

Cosmic-ray

- Result
- 確かにバイアスを上げると良くはなる...
- が, 1個読みの時よりも悪い...

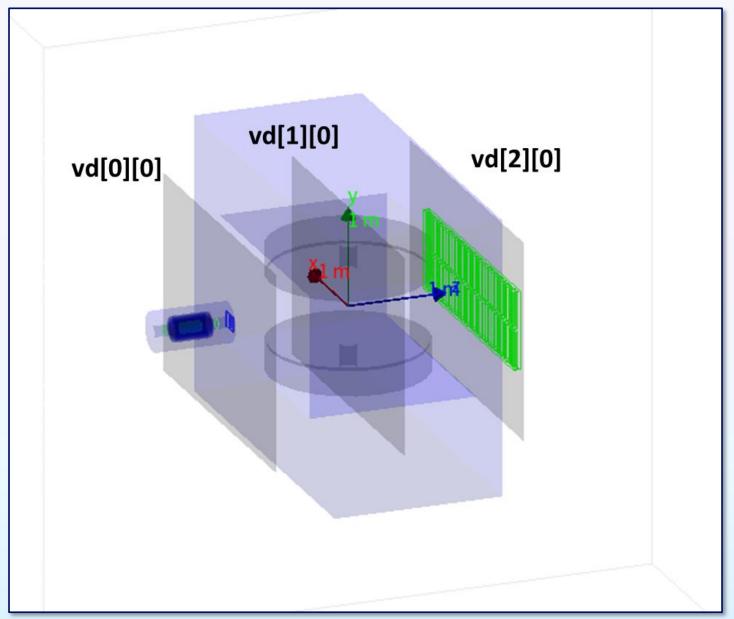

Kinematics: KMaid at Target

• Particle: K⁺ × 100,000

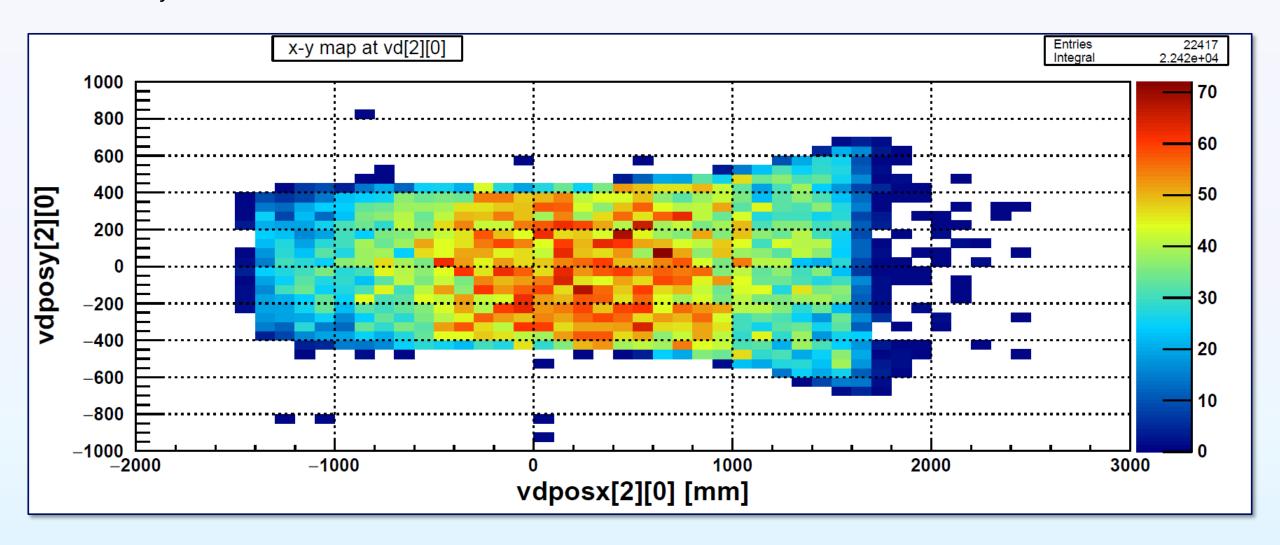

• Magnet field: 680 map

• Material: Air

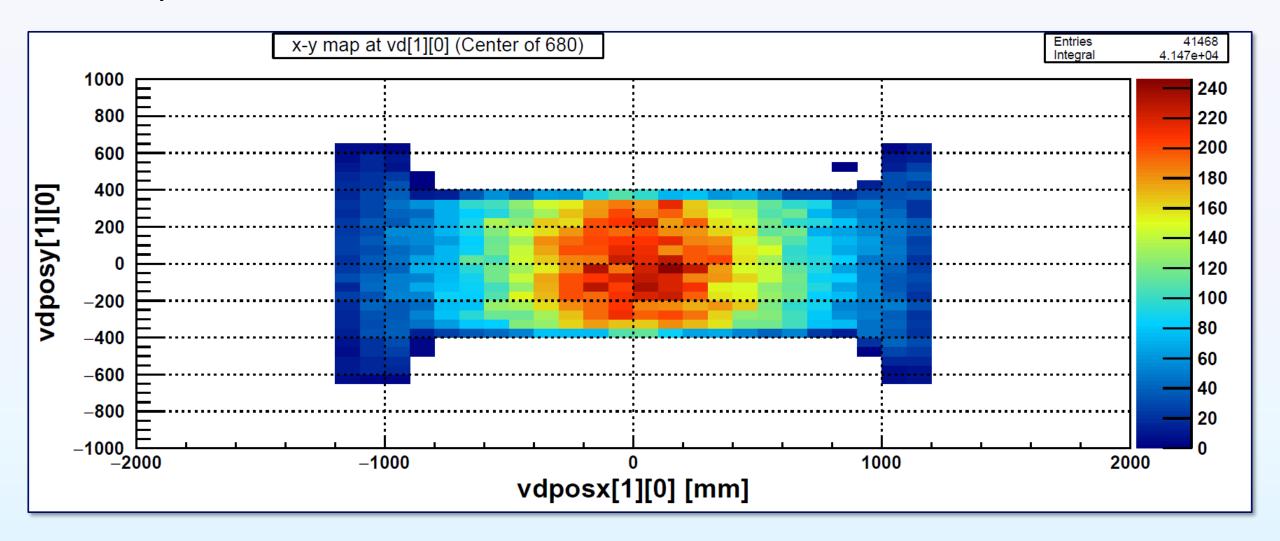

w/o decay

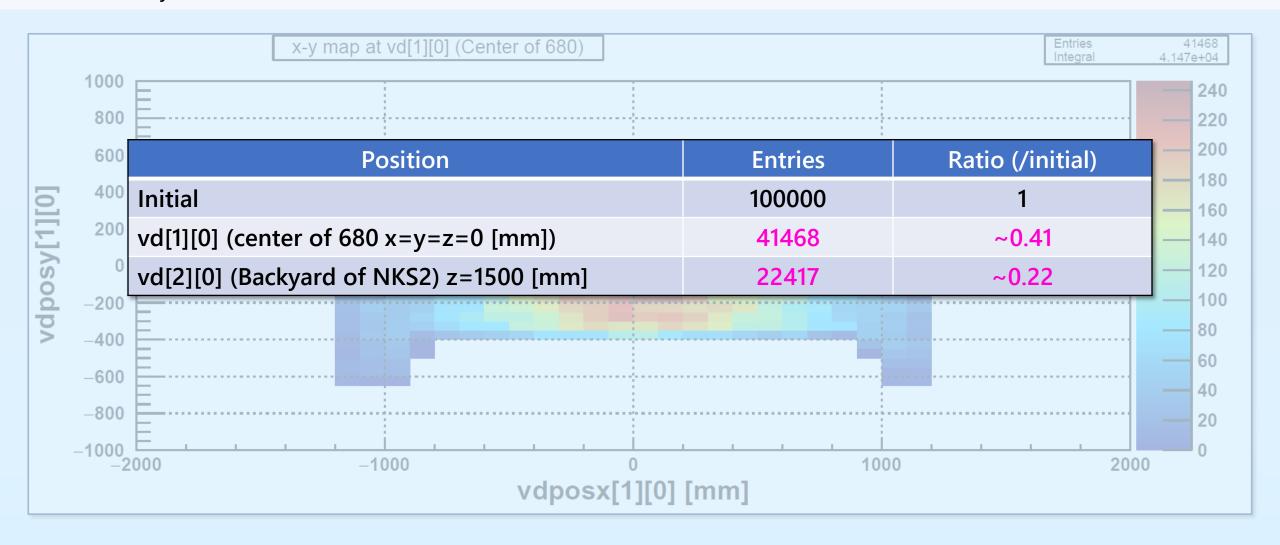

• Check x-y correlation at virtual detectors

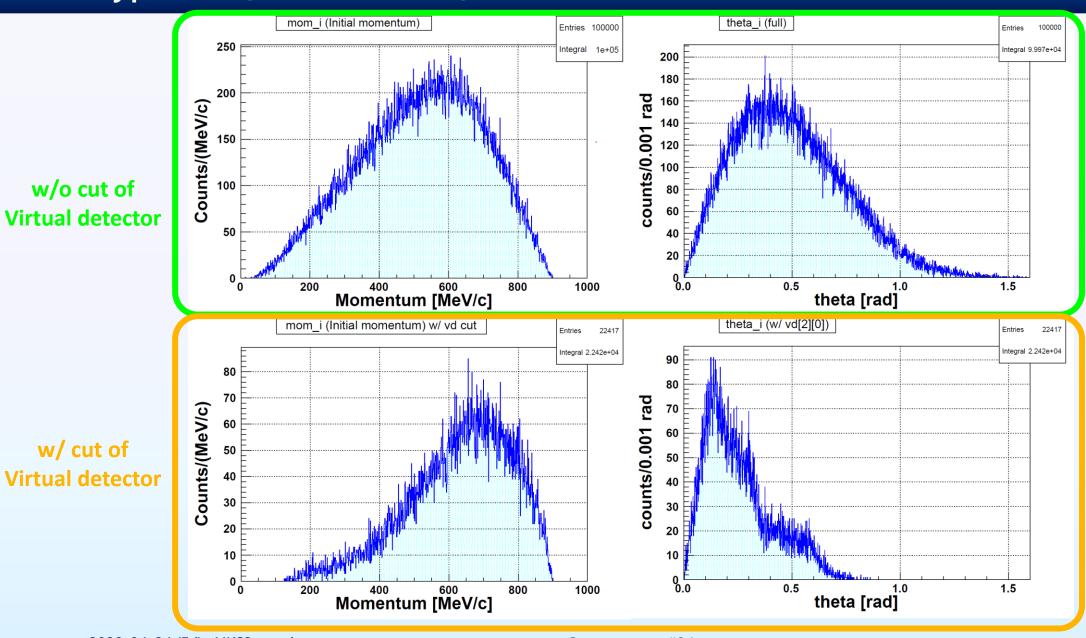

• Check x-y correlation at virtual detectors

• Check x-y correlation at virtual detectors

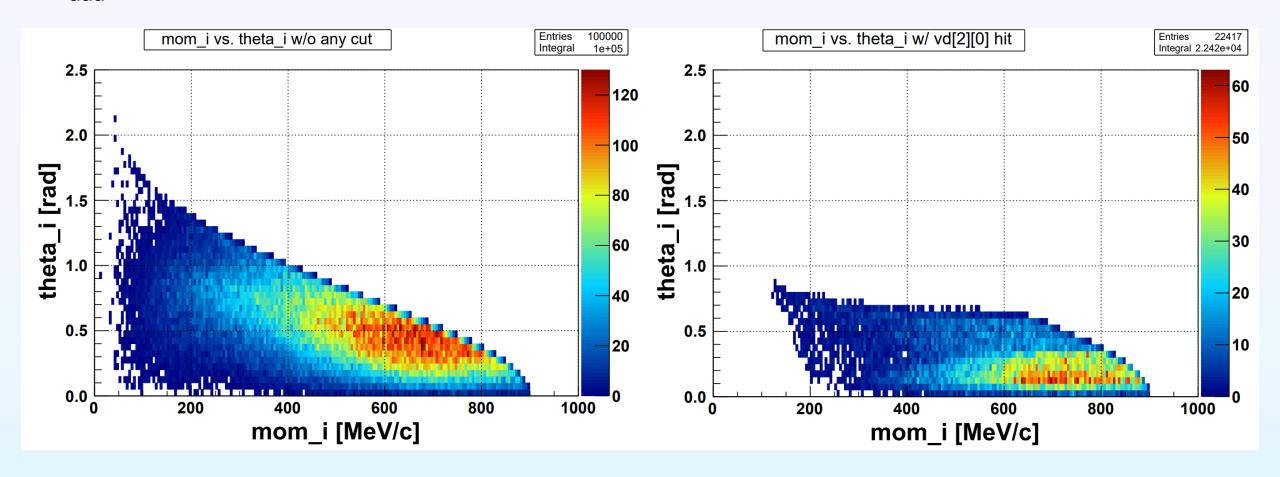

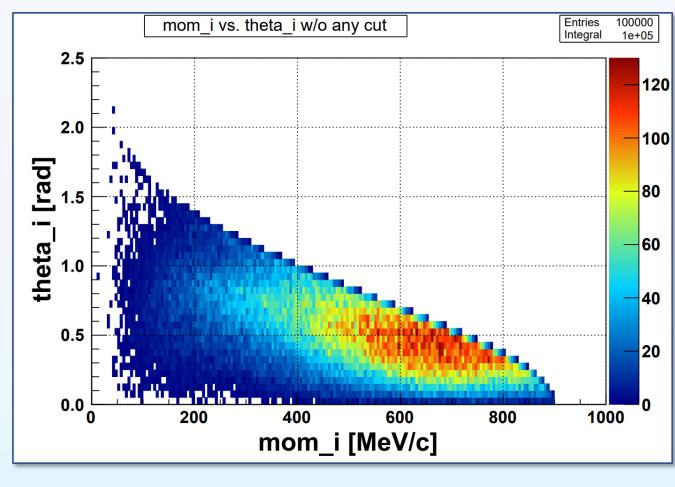

w/o cut of

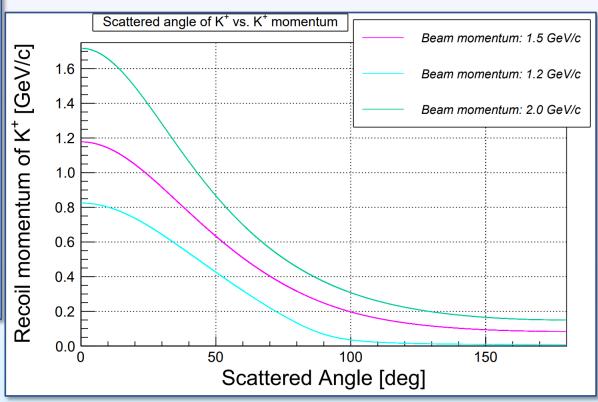

w/ cut of

aaaa

• p(γ, K+)Λ reaction の運動学を反映していると思われる (?)

✓ G4 simulation

- Modify the position of Virtual detectors (ToF wall),
- Study timing resolution and detector size
 - ⇒ e+, π+などを含めるには? (KMaid, Material on では p, π+が~10 イベントだった. decay もON?)
 - (⇒ 分解能を与える方法)

✓ 宇宙線測定

- 引き続き続行 (再現性確認)
- 他のMPPCのセッティングも試す(×2, ×4 w/ 44mm etc)

✓ 卒論
