

# Status report #30

ToF: new setup

• Tuning amp circuit for MPPC

2020. 06. 05 (Fri)

Tohoku Univ. M1

Tomomasa FUJIWARA

### Consistency check for MPPCx4s board

- Checked again.
- Setup:

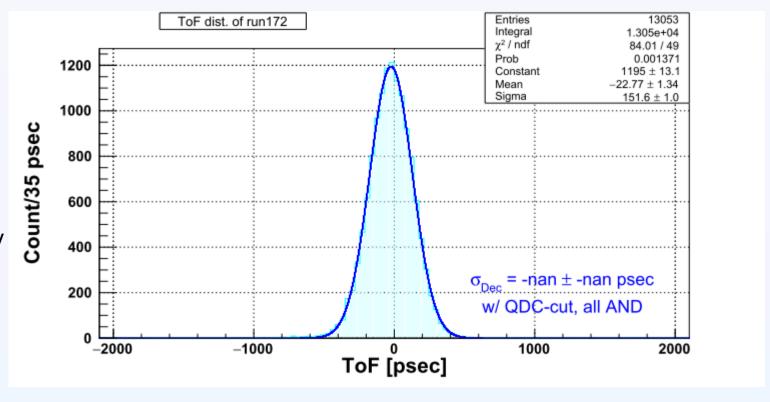

ToFR(upstream):  $5 \times 11 \times 300$  [mm3], mppcx1s ToFL(downstream):  $5 \times 22 \times 300$  [mm3], mppcx4s  $\times$  Both of them used new board (designed Fujiwara)

- V<sub>b</sub>-V<sub>op</sub> [V/mppc]: +9.0(Lside), +3.0(Rside)
- Taking 3-runs (~1run/day)
- Analysis: assuming Rside has the same resolution with Mar. data (~ 115 ps)

Run num.	σ <sub>detector</sub> [psec]
177	146.21 ± 2.44
178	$147.33 \pm 2.95$
179	141.29 ± 2.94
Ave.	~145

The run that has problem

- $\Rightarrow$   $\sigma$  of TOF(not intrinsic) = 151.6 ps
- Using only these 3 points
- ⇒ Intrinsic resolusion ~ 44 psec @ 44.7 V

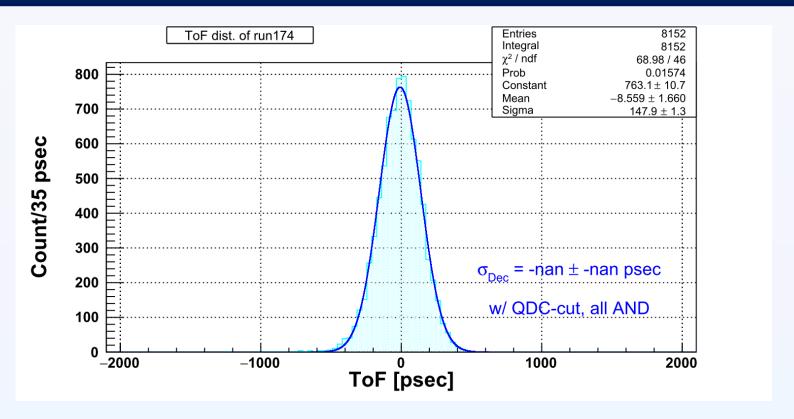

aaaaaa

Run num.	σ <sub>detector</sub> [psec]
177	146.21 ± 2.44
178	$147.33 \pm 2.95$
179	141.29 ± 2.94
Ave.	~145

### Comparison to the data

For higher bias run (+9.0 V/MPPC)  $\Rightarrow \sigma$  of TOF(not intrinsic) = 147.6 ps

- ギリギリ計算できるかどうかの値
- 改めて5×11×300 [mm3], MPPCx1s
   での測定を行う必要有と判断した

Run num.	σ <sub>detector</sub> [psec]
177	146.21 ± 2.44
178	$147.33 \pm 2.95$
179	141.29 ± 2.94
Ave.	~145

2020. 06. 05 NKS2 meeting Status report #30 M1 Tomomasa FUJIWARA

### New setup for ToF measurement

- Conventional setup: 2-scintillators ⇒ analysis: assuming that we know already resolusion one of them.
- New setup: 3-scintillators ⇒ calculation mathematical.
- Conbination: Target of test + reference × 2
   reference: 10 × 10 × 300 [mm³], MPPCx1s on old board
- Setup for measurement: underconstructing

 $5 \times 11 \times 300$  [mm<sup>3</sup>], MPPCx1s on new board

Between scintillators:
~58 mm

ToF-C

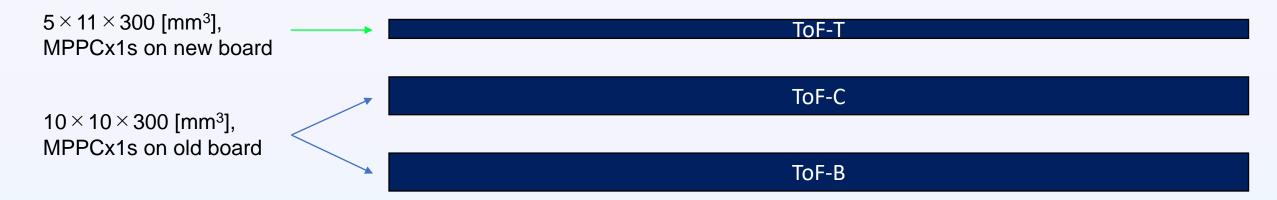

10×10×300 [mm³],
MPPCx1s on old board

ToF-B

2020. 06. 05 NKS2 meeting Status report #30 M1 Tomomasa FUJIWARA

#### √ Trigger logic

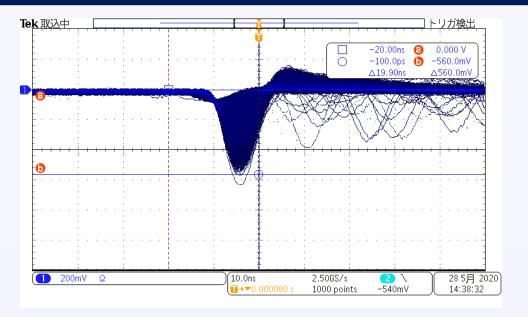

• Coincidence of 4-CHs of reference ⊕ clock. (carryout from scaler 0.5 Hz)

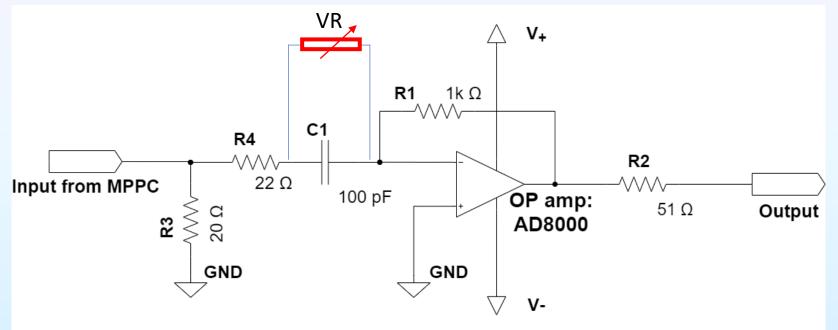

- First plan: All coin. of 6-CHs ⊕ clock.
- But too low event rate (1147 events for ~ 14 hours run ⇒ ~1.4counts/min.)
- Now testing for data taking.

### Tuning for amp circuit for MPPC

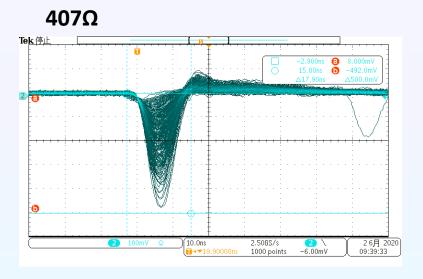

- Problem of MPPC amp circuit: Large over shoot
- Adding variable resistance ⇒ pole zero correction

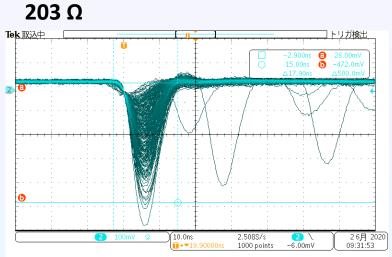

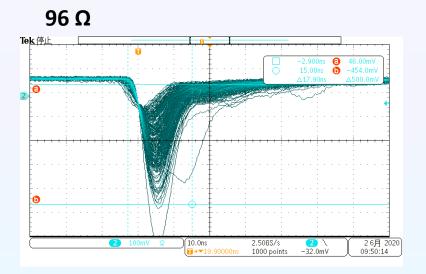

## Tuning for amp circuit for MPPC

• Comparison for various value

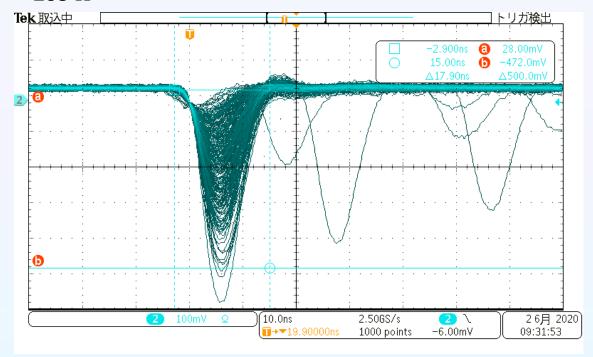

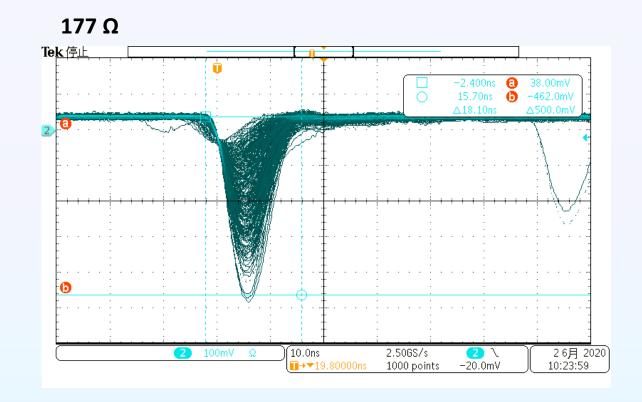

• Comparison for various value

#### 203 Ω

⇒ Employed 170-177  $\Omega$ 

### **Others**

• JPS application:
